Introduction to Management

Building with Artificial Intelligence

Summary

Applied AI Engineer and Project Manager with a background in data analytics and software-enabled automation. Experienced in building and deploying AI-powered applications including chatbots, AI agents, and internal business automation systems. Skilled in integrating AI APIs, designing Retrieval-Augmented Generation (RAG) systems, and deploying production applications through modern cloud platforms. Combines technical AI system development with strong client-facing project leadership: managing scope, budget, and delivery timelines while implementing AI-driven solutions that improve operational efficiency and decision making.

Experience

Lifewood Data Technology

Project Manager | AI Executive

07/2024 – Present

- Build and deploy AI-powered applications including chatbots, AI agents, and internal automation tools.
- *Design* RAG-based AI systems integrating organizational knowledge into intelligent workflows.
- Integrate external AI APIs and deploy applications using Vercel.
- *Develop internal AI architecture framework* PRMACE (Prompt, RAG, MCP, Agent, Clone, Mixture of Experts).
- Lead client meetings, gather requirements, and manage project scope, schedule, and budget.
- *Successfully delivered* 3+ projects on time and within budget.

Channel Precision Inc.

Data Analyst

11/2022 – 05/2024

- Cleaned and standardized high-volume datasets to ensure data accuracy and consistency.
- Supported analytics teams by preparing reliable datasets for reporting and analysis.
- *Recognized for strong performance* and promoted to Trainer after 7 months.

Innodata

Data Entry Specialist

- Categorized and validated digital data while maintaining strict quality standards.
- Delivered time-sensitive tasks with high accuracy.

Education

Cebu Technological University

Bachelor of Science in Information Technology

2018–2022

- Capstone Project: IRENT – Lead Developer. Designed and deployed a cross-platform Web and Mobile marketplace for peer-to-peer item rentals.
- Automated Rental Management System: Built a scalable application for item rentals, optimized user retention by developing a custom notification engine for rental expiration and integrated third-party APIs for secure payment processing.
